Wormall
Group of Companies

Advanced Maintenance Shaft

Lightweight (20 – 25kg)

Brand new technology (state of the art)

Requires no alignment adjusting bends

Requires no variation to traditional design practices

Requires no human access

Versatile – the only maintenance shaft able to accommodate all angles and grades, any configuration required

Accommodates connection of new lines to an installed product

Minimal delays to the end user (same day delivery if required)

Practical – polyethylene provides fantastic chemical, impact & UV resistance

Accommodates traditional & latest inspection methods

Proven to an installed depth of 7.5m below water logged ground (wet test tank provides continual performance testing)

100% watertight – every product air tested to 30Kpa

Increases profits and efficiencies to the end user

Designed utilising independent ‘3D Finite Element Analysis’

Utilises (state of the art) acrylic adhesive, never before seen in the construction industry for the joining of Polyethylene
